(5) A capability to assist an injured diver into the decompression chamber.

# §197.318 Gages and timekeeping devices.

- (a) A gage indicating diver depth must be at each dive location for surface-supplied dives.
- (b) A timekeeping device must be at each dive location.

## § 197.320 Diving ladder and stage.

- (a) Each diving ladder must-
- (1) Be capable of supporting the weight of at least two divers;
- (2) Extend 3 feet below the water surface:
  - (3) Be firmly in place;
- (4) Be available at the dive location for a diver to enter or exit the water unless a diving stage or bell is provided and
- (5) Be—(i) Made of corrosion-resistant material; or
- (ii) Protected against and maintained free from injurious corrosion.
  - (b) Each diving stage must-
- (1) Be capable of supporting the weight of at least two divers;
- (2) Have an open-grating platform;
- (3) Be available for a diver to enter or exit the water from the dive location and for in-water decompression if the diver is—
- (i) Wearing a heavy-weight diving outfit; or
- (ii) Diving outside the no-decompression limits, except when a bell is provided; and
- (4) Be—(i) Made of corrosion-resistant material; or
- (ii) Protected against and maintained free from injurious corrosion.

# § 197.322 Surface-supplied helmets and masks.

- (a) Each surface-supplied helmet or mask must have—
- (1) A nonreturn valve at the attachment point between helmet or mask and umbilical that closes readily and positively:
  - (2) An exhaust valve; and
- (3) A two-way voice communication system between the diver and the dive location or bell.
- (b) Each surface-supplied air helmet or mask must—

- (1) Ventilate at least 4.5 ACFM at any depth at which it is operated; or
- (2) Be able to maintain the diver's inspired carbon dioxide partial pressure below 0.02 ATA when the diver is producing carbon dioxide at the rate of 1.6 standard liters per minute.

#### § 197.324 Diver's safety harness.

Each safety harness used in surfacesupplied diving must have—

- (a) A positive buckling device; and
- (b) An attachment point for the umbilical life line that—
- (1) Distributes the pulling force of the umbilical over the diver's body; and
- (2) Prevents strain on the mask or helmet.

#### § 197.326 Oxygen safety.

- (a) Equipment used with oxygen or oxygen mixtures greater than 40 percent by volume must be designed for such use.
- (b) Oxygen systems with pressures greater than 125 psig must have slow-opening shut-off valves except pressure boundary shut-off valves may be ball valves.

### §197.328 PVHO-General.

- (a) Each PVHO, contracted for or purchased after February 1, 1979, must be built and stamped in accordance with ASME PVHO-1.
- (b) Each PVHO, contracted for or constructed before February 1, 1979, and not Coast Guard approved, must be submitted to the Coast Guard for approval prior to February 1, 1984.
- (c) To be approved under paragraph (b), a PVHO must be—
- (1) Constructed in accordance with part 54 of this chapter; or—
- (2) Be built in accordance with section VIII, division 1 or division 2 of the ASME Code; and—
- (i) Have the plans approved in accordance with §54.01–18 of this chapter;
- (ii) Pass the radiographic and other survey tests of welded joints required by section VIII, division 1 or division 2, as appropriate, of the ASME Code; and
- (iii) Pass—(A) The hydrostatic test described in §54.10–10 of this chapter; or
